ONLINE ACTIVITY 7: Creating User Model

Objective

- 1. Design a user model in User Centered System Design (UCSD)
- 2. Evaluate interactive systems using Nielsen's Heuristics

Materials

- Personal computer
- MS Word

Background

Atakan(2006), To understand UCSD, you first need to understand the people who will use the systems. One way to do is through the concept of user modeling. A user model is a psychologically valid way of depicting the people who will use the systems, and whose needs and preferences will be considered when designing those systems.

Procedure

- a. Look for two existing websites and do the following:
 - 1. Identify possible expected users of the said websites
 - 2. Evaluate the designs of the two websites according to Nielsen's Heuristics. Justify

Table 1: Evaluation Criteria (Based on the 10 heuristics of design evaluation) for website 1.

A. Visibility of System Status	WEBSITE NAME: AMAZON						
A. Visibility of System Status - The system design provides appropriate feedback like message prompts in response to user actions. - The message prompts are clear, visible and understandable. Evaluation Amazon provides real-time feedback during shopping, like showing items added to the cart and order status updates. B. Match between the system and the real world - Used words, phrases and concepts according to users' language rather than system oriented words and computer jargons. Evaluation Terms connected to shopping that are well-known to users, such "wishlist," "checkout," and "cart," are used by Amazon. C. User control and freedom - The system design provides ways of allowing users to easily "get in" and "get out" if they find themselves in unfamiliar parts of the system. Evaluation Despite some product categories being highly buried, Amazon makes it simple for visitors to return to the homepage or their cart. D. Consistency and Standards - The colors, text, labels, buttons and other elements in the design are uniform from start to finish. - Text and icons are not too small or too big. Menus and other features of the system are arranged and positioned in a consistent way. (For ex. If your website has navigation buttons on the top under the page title on one page, the users will automatically look there for the same features on	URL: https://www.amazon.com						
- The system design provides appropriate feedback like message prompts in response to user actions The message prompts are clear, visible and understandable. Evaluation Amazon provides real-time feedback during shopping, like showing items added to the cart and order status updates. B. Evaluation					
Because Amazon keeps its design standards uniform throughout it	s platform	, navigating	g is easy to ι	ıse.	
E. Error Prevention			/		
- The system design provides an automatic detection of errors					
and preventing them to occur in the first place.					
- Idiot proofing mechanisms are applied			/		
Evaluation					
Clear options and confirmations are how Amazon typically keeps e	rrors at bay	y, although	occasionall	y problems li	ke payment
difficulties can happen.					
F. Help users recognize, diagnose and recover from errors			/		
- Error messages and the terms used are recognizable, familiar					
and understandable for the users.					
Evaluation		1			
Amazon sometimes lacks prompt, comprehensive assistance, but if	does offer	r clear erroi	r notices alo	ng with trou	bleshooting
instructions.				Ü	J
G. Recognition rather than recall	/				
- Objects, icons, actions and options are visible for the user.	,				
- Objects are labeled well with text and icons that can					
immediately be spotted by the user and matched with what they					
want to do.					
Evaluation					
Easy recognition is emphasized in Amazon's design through clearly	, laheled ic	ons and alt	ernatives		
Lasy recognition is emphasized in Amazon's design emodel electry	iaberea re	ons and are	erriatives.		
H. Flexibility and efficiency of use	/				
The system design provides easy to navigate menus.	/				
- the system does not make wasteful time of system resources.					
Evaluation					
With its organized menu system and individualized recommendati	one Amaz	on's naviga	tion is offer	tivo	
with its organized menu system and muridualized recommendati	Olis, Alliazi	on s naviga	tion is enec	uve.	
I. Aesthetic and minimalist design				1	
-Graphics and animations used are not difficult to look at and				/	
does not clutter (mess) up the screen.					
- Information provided is relevant and needed for the system					
design.					
Evaluation	A	اء ما محمد ۱	i i- f		
Although it can seem overwhelming with so many adverts and sug	gestions, A	Amazon S u	esign is luni	Lionai.	
	,	1			
J. Help and Documentation	/				
-the system design provides information that can be easily					
searched and provides help in a set of concrete steps that can					
easily be followed.					
Evaluation		_			
Customer support options and extensive assistance materials are	offered by	Amazon.			
SUGGESTION FOR IMPROVEMENTS					
					_
 Limit the amount of advertising and recommend 	ations th	at are disp	played at o	once to les	sen visual
clutter.					
 Provide more thorough, context-sensitive assista 	nce to en	nhance mi	stake reco	overy instr	uctions.

Table 2: Evaluation Criteria (Based on the 10 heuristics of design evaluation) for website 2.

URL: www.coursera.org					
Area of Evaluation	5	4	3	2	1
A. Visibility of System Status	/				
- The system design provides appropriate feedback like message					
prompts in response to user actions.		/			
- The message prompts are clear, visible and understandable.					
Evaluation Coursera offers concise status reports on quiz submissions, enrollr	nent stat	us, and co	urse progre	SS.	
B. Match between the system and the real world	/				
- Used words, phrases and concepts according to users' language					
rather than system oriented words and computer jargons.					
Evaluation					
Employs educational jargon and clear course designs that are remi	niscent o	f classrooi	n settings.		
C. User control and freedom	/				
- The system design provides ways of allowing users to easily					
"get in" and "get out" if they find themselves in unfamiliar parts					
of the system.					
Evaluation			l .		
D. Consistency and Standards - The colors, text, labels, buttons and other elements in the design	/				
are uniform from start to finish.		,			
- Text and icons are not too small or too big.		/			
- Menus and other features of the system are arranged and			/		
positioned in a consistent way. (For ex. If your website has					
navigation buttons on the top under the page title on one page,					
the users will automatically look there for the same features on					
other pages.					
Evaluation All pages have a consistent layout, color palette, and navigation sy	stem.				
E. Error Prevention		/			
- The system design provides an automatic detection of errors					
and preventing them to occur in the first place.					
- Idiot proofing mechanisms are applied		/			
Evaluation			I		
Offers clear instructions and form validation to help prevent errors	s. Certain	mistake a	voidance sy	stems can be	e improve
F. Help users recognize, diagnose and recover from errors			/		
- Error messages and the terms used are recognizable, familiar					
and understandable for the users.					
Evaluation				·	
Though some error messages could use more detail, most are und	erstanda	ble and he	lpful.		
G. Recognition rather than recall	/				

- Objects are labeled well with text and icons that can					
immediately be spotted by the user and matched with what they					
want to do.					
Evaluation	l				
The well-labeled and intuitive navigation and actions minimize coa	gnitive stre	SS.			
H. Flexibility and efficiency of use	/				
- The system design provides easy to navigate menus.					
- the system does not make wasteful time of system resources.					
Evaluation					
Excellent navigation featuring sophisticated search and filtering ca	pabilities. E	Both novice	s and exper	ts can use th	e interface.
I. Aesthetic and minimalist design	/				
-Graphics and animations used are not difficult to look at and					
does not clutter (mess) up the screen.					
- Information provided is relevant and needed for the system					
design.					
Evaluation				•	
With only the most important information and few distractions, the	ne design is	clear and	simple.		
		, 1		Т	
J. Help and Documentation		/			
-the system design provides information that can be easily					
searched and provides help in a set of concrete steps that can					
easily be followed.
